Orthodontic Treatment May Help Turn a Bad Bite into a Healthy Smile.

Why are Dental X-Rays Important?

Problems, often inherited or caused by disease, accidents or oral habits, may include:

- **Underbite:** When lower teeth overlap with upper teeth caused by lower-jaw misalignment.¹
- **Overbite:** When upper teeth overlap with lower teeth typically caused by oral habits.¹
- **Crossbite:** When some upper teeth close inside the lower teeth rather than the outside.¹
- **Crowding:** When teeth are too close together, making it harder to properly clean them.¹
- **Spacing:** When there is extra space between teeth.¹

What Can Be Done to Correct Orthodontic Problems?*

Orthodontists are able to better align the jaws and teeth with a range of treatment options. Treatment time varies, but, on average, is less than two years. Common treatments include:

- **Braces** consist of brackets, arch wires and bands that are fixed firmly to the teeth and are adjusted over time to straighten teeth using tension.
- **Clear Aligners**, often favored by adults, are virtually unnoticeable and can be removed for eating and drinking. They are replaced every two to three weeks with tighter aligners to straighten teeth using tension.*
- **Retainers** are used after treatments like braces or aligners to stop the teeth from moving back to their original positions. Permanent retainers may also be used, which are bonded to the back of the teeth to prevent movement.

VBA, in partnership with TruAssure Insurance Company, offers plans that provide easier access to dental care. **To learn more, visit vbaplans.com/dental.**

All TruAssure dental plans are offered in association with the DenteMax Plus dental network arrangement, which includes participating dentists from the United Concordia, DenteMax and Connection dental networks.

Orthodontics are used to create a healthy bite full of straight, evenly spaced teeth that properly meet their opposing teeth on the opposite jaw.

Orthodontics Can Help Prevent:⁴

- Difficulties with chewing and/or speaking
- Excess stress on jaw bones
- Tooth decay
- Gum disease
- Abnormal tooth enamel wear
- Other potentially costly dental problems

Did You Know?

Because of its malleability, gold was often the metal of choice for braces in the 1900s⁵

One in four orthodontic patients today is an adult⁶

All orthodontists are dentists, but only 6% of dentists go through the more than 4,800 hours of additional orthodontic training⁷
